Liquid water exists on Mars, boosting hopes for life there, NASA says

(CNN) Potentially life-giving water still flows across the ancient surface of Mars from time to time, NASA scientists said Monday in revealing a potential breakthrough in both the search for life beyond Earth and human hopes to one day travel there. While the discovery doesn't by itself offer evidence of life on Mars, either past or present, it does boost hopes that the harsh landscape still offers some refuge for microbes to cling to existence. "The existence of liquid water, even if it is super salty briny water, gives the possibility that if there's life on Mars, that we have a way to describe how it might survive," said John Grunsfeld, associate administrator for the Science Mission Directorate at NASA. It remains unclear where the water comes from. Theories include deliquescence, melting subsurface ice or even a liquid-water aquifer that feeds the process. Discovering what precisely is causing the phenomenon is a mystery for the next round of investigations, said Michael Meyer, lead scientist for NASA's Mars Exploration Program. The researchers' findings are in a new paper being presented this week at the European Planetary Science Congress in France.

2 dead, hundreds injured after Typhoon Dujuan slams Taiwan

(CNN) Typhoon Dujuan walloped Taiwan with howling winds and sheets of rain, killing at least two people and injuring more than 300 before heading on to mainland China. The powerful storm made landfall late Monday on Taiwan's east coast, pummeling the town of Suao with gusts as strong as 246 kph (153 mph). Two men died after being knocked down by strong winds, Taiwan's Central Emergency Operation Center said Tuesday, and another 324 people were injured amid the storm, most of them by flying debris or car accidents. Dujuan also dumped well over half a meter (20 inches) of rain on the mountains of northeastern Taiwan, raising concerns of flooding or landslides. The military had evacuated roughly 5,000 people living in vulnerable mountainous areas ahead of the storm's arrival, according to Taiwan's Central News Agency. The storm also prompted the suspension of many public transportation services and cancellations or delays of dozens of flights, the agency reported. The typhoon churned away from Taiwan early Tuesday and slammed into mainland China's densely populated southeastern coast, where authorities had evacuated more than 260,000 people in anticipation of the storm's impact, according to state media. Dujuan had significantly weakened as it neared the coast of the Chinese province of Fujian, but it was still generating typhoon-force winds and rain heavy enough to cause flash floods.

SITUATION SUMMARY

WEATHER

WEATHER SYNOPSIS BY REGION:

NORTHERN CALIFORNIA AND CENTRAL COASTAL AREAS:

Eureka Weather:

Dry and seasonable weather conditions will continue through mid-week with nighttime and morning low clouds and fog along the coast with some drizzle expected tonight. Some cooling will occur late week as a weak trough passes overhead but no precipitation is expected at this time.

Medford Weather:

Warm temperatures will continue today as the thermal trough lingers inland west of the Cascades. The short term forecast is on track with the ridge to shift east tonight and Wednesday as upstream trough approaches the coast. The trough will help to drive a trough or a dry cold front inland on Wednesday. Moisture field is lacking except for southeast part of the forecast area in northeast California. However we may see a few showers over the Cascades or the coastal range. The day could also be breezy and could present a fire weather concern especially for the Klamath and Goose Lake Basins. High temperatures on Wednesday are expected to fall about 5 degrees from today and then another 3 to 5 degrees on Thursday. A stronger onshore flow on Wednesday night could lead to marine stratus moving into the Umpqua Basin, and possibly into northern Josephine County by Thursday morning.

Reno Weather:

Mild conditions will continue through Wednesday with mostly cloudy skies for much of the Sierra and western Nevada near and south of Interstate 80. A trough moving across the region late Wednesday into Thursday will bring cooler temperatures along with chances for rain. A lot of uncertainty exists for the weekend, but the trend is for cooler conditions and the potential for precipitation.

San Francisco Weather:

Mostly cloudy skies today but temperatures still near normal. No big changes for Wednesday but temperatures may trend a few degrees cooler. Upper trough arrives later Wednesday night into Thursday morning with a slight chance of rain showers, mainly south of San Francisco. The upper low moves inland by Thursday night with a warming and drying trend Friday and Saturday. A cold but mainly dry upper low drops down the coast on Sunday with a noted cooling trend to wind out the weekend.

WEATHER

WEATHER SYNOPSIS BY REGION:

CENTRAL CALIFORNIA AND SOUTHERN SAN JOAQUIN VALLEY:

Sacramento Weather:

Expect a gradual cooling trend through mid week with a chance of light showers south of Interstate 80 on Wednesday and Thursday. Another weather system may bring a chance of mountain showers over the weekend, but confidence is low.

Hanford Weather:

A cooling trend will take place the next few days with temperatures lowering to near normal by Thursday. Bands of high level clouds will continue to move across the area but dry conditions will prevail through the week. Winds will generally be light through Wednesday then become breezy to locally gusty on Thursday.

SOUTHERN CALIFORNIA:

Los Angeles Weather:

Temperatures will remain slightly above normal through mid-week with a trough to the west and a ridge to the east. The trough of low pressure will move through the area on Thursday, bringing slightly cooler conditions. Surface high pressure will build into the Great Basin by late week, possibly resulting in weak offshore flow and warmer, drier conditions for the weekend.

Extreme Southwestern California including Orange, San Diego, Western Riverside and Southwestern San Bernardino Counties:

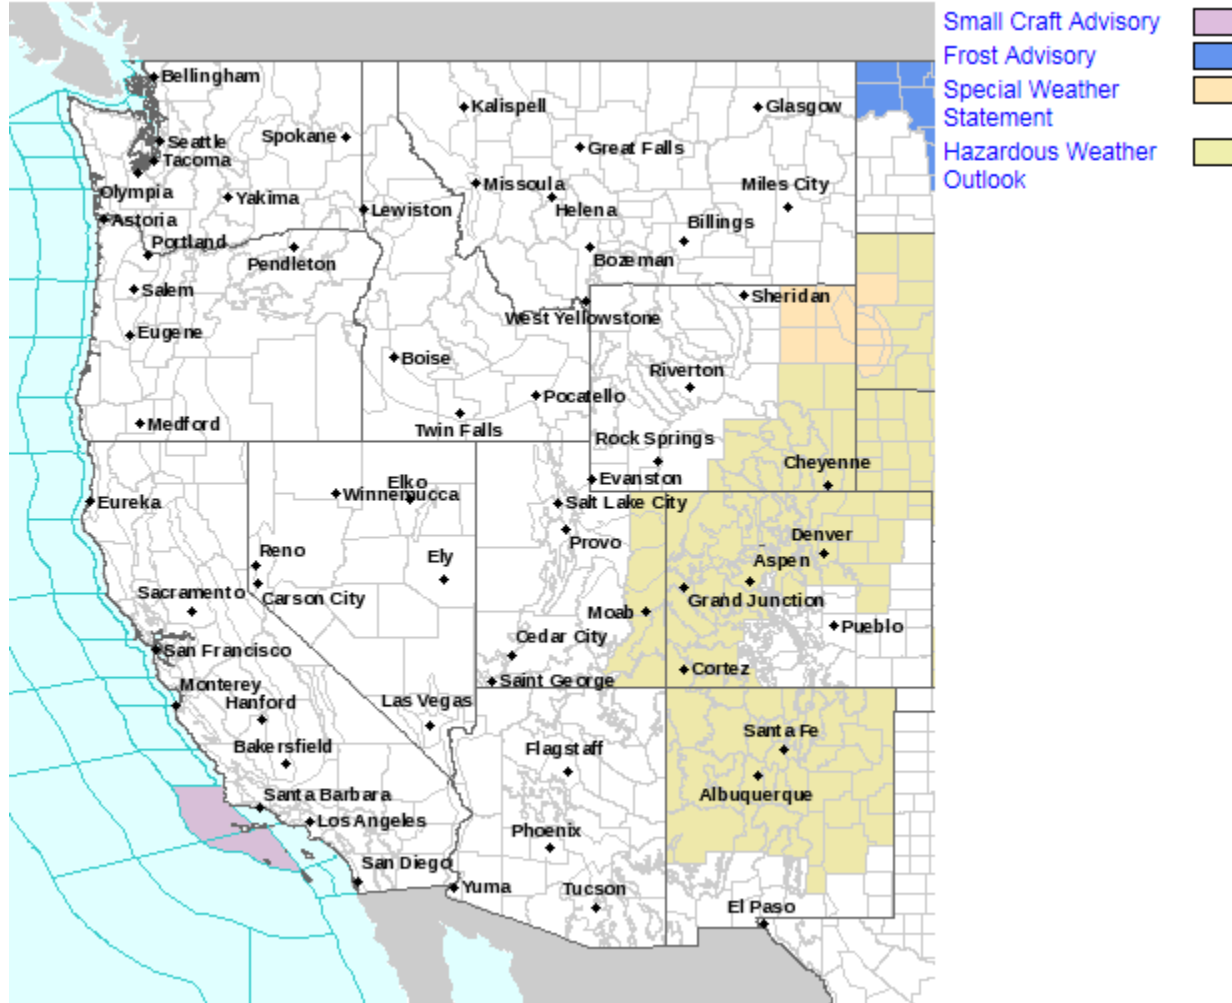

Fair and warm weather will continue through Saturday with above normal temperatures and a fairly shallow marine layer. Sunday and Monday will be cooler as a trough of low pressure comes down the coast. It will deepen the marine layer and bring a slight chance of showers.

Southeast California Weather:

Warm and dry weather with periods of high clouds can be expected through Wednesday. A cold front will approach the area Thursday bringing an increase in wind speeds and the possibility of showers to the Sierra and southern Great Basin. Cooler temperatures will arrive Friday through the weekend before another cool and possibly stronger storm system moves into the region on Sunday.
